Anurag Singh

mail.anurags01@gmail.com - linkedin.com/in/anurag-s01 - anuragsinghdev.vercel.app - +91-7726074143

Education

- **National Institute of Technology, Jamshedpur** 2023
  B.Tech with Honors in Computer Science and Engineering - CGPA: 8.44/10 *Jamshedpur, India*

Skills

- **Languages**: Java, C++, SQL
- **Backend Architecture**: Spring Boot, Kafka, RabbitMQ, Resilience4j, Spring Batch, Event-Driven Architecture, Distributed Systems
- **Databases**: MySQL, MongoDB, Aerospike, Elastic Search
- **Generative AI and LLM Engineering**: LLMs, LangChain, LangGraph, RAG, Vector Databases, Prompt Engineering
- **Cloud, DevOps and Observability**: AWS, Docker, New Relic, Datadog, Grafana, CubeAPM

Achievements

- **4x Silver Award** - Notification Platform (cross-brand adoption); Domino's-Zomato IRCTC integration; Multitenancy EBU project; Campaign Engine (Next-Gen Delivery Charges Platform)
- **Star Employee** - Recognized for outsized impact on Notification Platform and IRCTC Train Ordering launches
- **Chairperson Award Nominee 2025** - Best Market Maker of the Year for Flat Price Menu innovation driving conversion uplift

Experience

- **Senior Software Engineer** Aug 2025 - Present
  Jubilant FoodWorks *Remote*

  Backend platform engineering for Domino's India ordering, personalization, payments, and real-time decisioning systems.
  - Built a real-time, ML-driven store stress evaluation platform ingesting live order events via **Kafka** and invoking a predictive model to score per-store operational load, auto-triggering mitigations via **RabbitMQ** across a multi-tenant fleet of 2500+ stores.
  - Launched **TWID** loyalty-points as a new payment tender end-to-end across payments and order-management services, building balance, payment-options, and order-placement flows across all tenders (cash, card, UPI, wallet) to unlock point redemption at checkout.
  - Architected a zero-deployment, multi-tenant **Campaign Engine** microservice with a custom rule evaluation core for complex condition schemas, enabling real-time cart personalization and dynamic promotions for millions of daily sessions without code deployments.
  - Expanded Domino's payment and acquisition surface by integrating **Swiggy Toing** with the core ordering backend and onboarding **Razorpay** and **VIPL eVoucher** as payment partners.
  - Digitized **Corporate Orders** end-to-end from a fully offline process to a self-serve online platform, eliminating manual fulfillment overhead and expanding B2B revenue through full backend ownership of the order-processing flow.

- **Software Engineer** July 2023 - July 2025
  Jubilant FoodWorks *Noida, India*

  Distributed systems, event-driven infrastructure, and conversion-driving feature development for Domino's, Hongs Kitchen & Popeyes.
  - Unified all JFL brand notifications into a centralized, event-driven, multi-tenant **Notification Platform** on **Kafka** and **Spring Boot**, processing **millions of requests/day** across 5 channels - SMS, Push, Email, WhatsApp, and Live Notifications - with fallback and traffic diversion mechanisms, adopted by all JFL brands.
  - Extended Domino's ordering reach to India's rail passenger network by integrating **Zomato IRCTC Train Orders** via a dynamic template-driven backend optimized for third-party extensibility and delivery accuracy.
  - Boosted IRCTC flow conversion rate by **230 bps** and grew train order volume by **25%** by leading a complete backend revamp to a **Next-Gen Train Ordering Flow** - redesigning end-to-end order processing pipelines for higher reliability and reduced drop-off.
  - Cut MongoDB query latency by **79%** (from 18.7ms to 3.9ms) and reduced request handling overhead by **91%** through advanced query profiling, index strategy redesign, and projection optimization.
  - Drove up to **49% uplift** in campaign-driven conversions by shipping **Flat Price Menu** - a feature with time- and region-scoped **feature toggles** and A/B experimentation across user segments.

- **Graduate Engineering Trainee** Jan 2023 - June 2023
  Jubilant FoodWorks *Gurugram, India*

  Microservices reliability, framework upgrades, and security hardening across core order-processing services.
  - Hardened reliability of core BAU microservices by implementing circuit breakers via **Resilience4j** and executing a Java and Spring Boot version upgrade, reducing cascading failure risk in critical order-processing pipelines.
  - Eliminated high-severity CVEs across the microservices estate by integrating **OWASP Dependency-Check** into CI/CD pipelines, systematically remediating exploit vectors in vulnerable third-party libraries.

- **Technology Intern** May 2022 - July 2022
  Standard Chartered *Remote*

  Full-stack tooling for corporate payment file validation and automated failure reporting.
  - Reduced corporate payment file validation errors and manual review cycles by delivering a full-stack solution - a custom Java-based JSON validator with automated failure-detail reporting and a **React.js** web interface.
